Why meningococcal vaccination is required for Hajj & Umrah Pilgrims?

Meningococcal Meningitis is an infection of the covering of the brain and spinal cord. Common symptoms include fever and a stiff neck but the infection can lead to seizures, coma or shock and can be fatal if treatment is delayed.

Meningococcal Meningitis is spread from person to person, mainly by coughing and sneezing. The risk of contracting the disease increases if you will be spending time in close contact with the local population such as visiting crowd places.

Meningococcal vaccination is required for pilgrims traveling to Mecca for the annual Hajj or performing Umrah. If traveling to Mecca, you will need a vaccination certificate showing a meningococcal inoculation within the previous 3 years.
